

# Birds of Prey from Croxteth Park

Mac is a baby owl who is fourteen years old. His yellow eyes means he hunts in the day. Mac eats voles, mice, butterflies and caterpillars.

We loved learning about the birds of prey. After meeting the owls we researched the changes from owlet to owl and wrote about it for our science work.

Casper is five years old. He is nocturnal because he has black eyes. He is a male British barn owl and he is silent when he flies.
