

Maths Party

KS1: Fun and Games

When was the last time you played with playing cards? There are many ways to use playing cards that allow you to have fun and practise your maths skills at the same time. You could find the total of 2 or 3 cards, the highest or lowest score wins. You could also use multiplication and division too.

Many family board games also use maths skills e.g. Monopoly, Scrabble, Connect 4, Battleships etc.

So go on...turn off your T.V. (and i pad, and mobile phone, and X box and!) and play some games instead.
