

Begins with an egg.

Underneath the shell is a caterpillar.

Teeth to chew through and come out of the shell.

Trying to eat a lot of plants.

Each time it grows, it sheds its skin.

Reaches a spot on a plant to make a chrysalis.

Forms wings and antennae.

Leaves the chrysalis as a butterfly.

Young caterpillar is gone, now it is a butterfly!

## Butterfly

Butterflies are beautiful

Unusual too

Their wings are very delicate

They are all different

Exotic butterflies lucky to see

Really colourful

Fluttering above the flowers

Landing on petals

Yellow madagascars are rare to find

Bright wings in the sunlight

Up under the clear sky of spring

To cheer our hearts

To make them sing

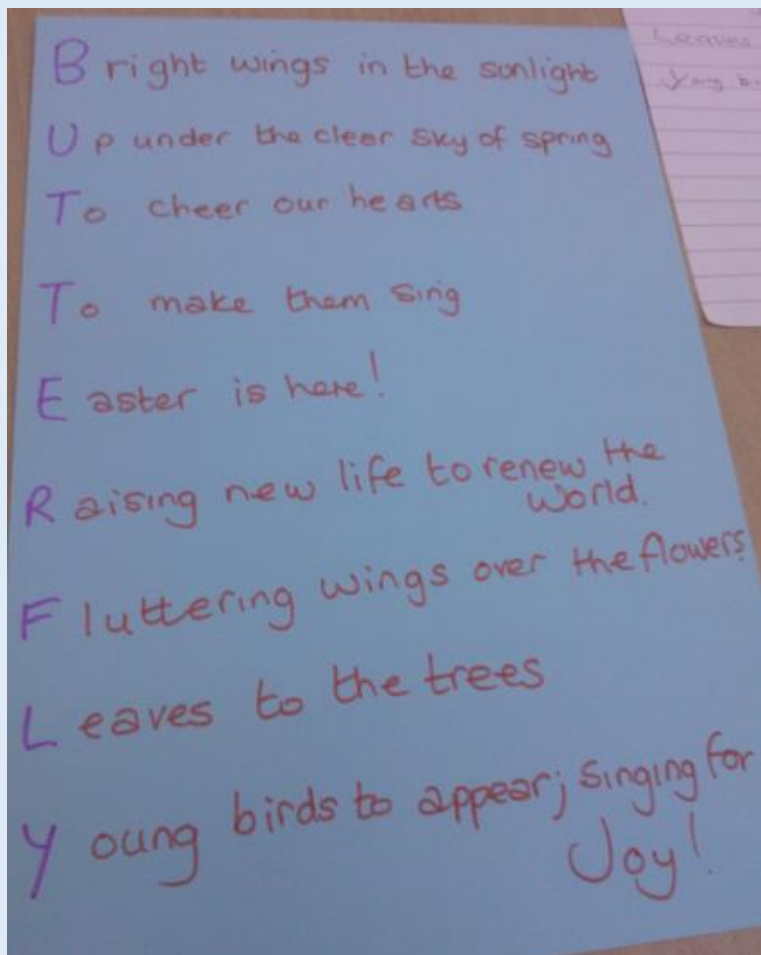

Easter is here!

Raising new life to renew the world.

Fluttering wings over the flowers

Leaves to the trees

Young birds to appear; singing for Joy!

## Butterflies

Beautiful creatures

Flying, landing, fluttering

Peaceful array of colors

Insect
